

Non-Hodgkin's Lymphoma

A study in patients with Non Hodgkin's lymphoma (GALLIUM)

A Study of Obinutuzumab (RO5072759) Plus Chemotherapy in Comparison With Rituximab Plus Chemotherapy Followed by Obinutuzumab or Rituximab Maintenance in Patients With Untreated Advanced Indolent Non-Hodgkin's Lymphoma (GALLIUM)

Trial Status
Completed

Trial Runs In
1 Countries

Trial Identifier
NCT01332968 2010-024132-41
(EudraCT number)

The source of the below information is the publicly available website ClinicalTrials.gov. It has been summarised and edited into simpler language.

Trial Summary:

This open-label, randomized study will assess the efficacy and safety of obinutuzumab (RO5072759) in combination with chemotherapy compared to rituximab (MabThera/ Rituxan) with chemotherapy followed by obinutuzumab or rituximab maintenance in participants with untreated advanced indolent non-Hodgkin's lymphoma. After the end of the induction period, participants achieving response (Complete response [CR] or partial response [PR]) will undergo a maintenance period continuing on the randomized antibody treatment alone every 2 months until disease progression for a total of 2 years. Anticipated time on study treatment is up to approximately 2.5 years. After maintenance or observation, participants will be followed for 5 years until progression. After progression, participants will be followed for new anti-lymphoma therapy and overall survival until the end of the study.
